RADIOGRAPHIC INTERPRETATION

NAME	HOLIDAY SOIREE 19	DATE	25AUG20
CONSIGNOR	WOODFORD THOROUGHBREDS	HIP #	K2009-0199
DVM	NR MITTS	SITES	REPOSITORY

The clinically significant radiographic findings* are listed below:

Left fore fetlock	mild sesamoiditis—medial
Right fore fetlock	very mild sesamoiditis—lateral
Left knee	NSA
Right knee	NSA
Left hind fetlock	very mild sesamoiditis—medial
Right hind fetlock	NSA
Left hock	NSA
Right hock	NSA
Left stifle	NSA
Right stifle	flattening—medial condyle
Read by	Nathan R. Mitts
Signature	<i>NATHAN R. MITTS</i>

* NSA = no significant abnormalities

These radiographs were taken as a survey of the most common sites for a lesion. They are not, nor are they meant to be a complete examination of the joints taken. They will identify approximately 90% of the common lesions. To identify the remaining infrequent lesions or to provide complete coverage of all joints would require many more views. These survey views usually represent the best combination of coverage and economics.
